

Cottonelle *DESTROYS* Ancient Forests!

Cottonelle is made with wood pulp from the North American Boreal forest – a threatened wildland that has been around for 10,000 years.

Why flush away ancient forests for a disposable product? After all, ancient forests are critical for fighting global warming, providing clean water and conserving fish and wildlife.

Tell Cottonelle maker Kimberly-Clark you won't buy Cottonelle until they use sustainable wood and quality recycled fiber to conserve ancient forests.
